Textile waterproofing

Properties

TEXTILE WATERPROOFING is a treatment product that makes all types of textiles hydrophobic, thereby making them waterproof and providing long-lasting protection against damage caused by water, humidity, and waterborne dirt (mould, stains, rings, etc.).

ADVANTAGES:

- Water-based product.
- Non-flammable.
- PFAS-free (fluoropolymer family considered 'forever chemicals' as they degrade very little in the environment and may build up in air, water, soil, and living organisms).
- Excellent hydrophobic effect.
- Easy to apply.
- Quick drying.

Instructions for use

Respect usual safety measures for the use of chemical products and wear the appropriate individual protection equipment.

TEXTILE WATERPROOFING is used undiluted on a clean, dry surface. For pre-cleaning, we recommend using our product **21 TEXTIL CLEANER**.

Spray a sufficient quantity of the product evenly over the surface to be treated, ensuring it is damp.

Leave to dry for a few hours at room temperature. The textile is then protected.

Technical specifications

Physical state: liquid **Colour:** yellowish **pH:** ca.3,5 **Density:** ca.0,99

Storage: keep tightly closed and protected from cold, frost, UV rays and heat in a ventilated place.

Environment: the surfactant(s) contained in this preparation complies(comply) with the biodegradability criteria as laid down in Regulation (EC) No.648/2004 on detergents.
